

Week 7 – Day 1

Task 2: Conversation Flow Design

This document presents the conversation flow designs for a production-grade AI Voice Agent for a real estate company. Each flow defines the sequence of interactions, decision points, and business actions that the AI follows to assist customers naturally while supporting property recommendations, appointment management, and CRM workflows.

Buyer Inquiry

Flowchart (text representation):

Description: This flow defines how the AI agent handles a buyer inquiry scenario, collects relevant information, invokes business tools when necessary, and concludes the interaction professionally.

Rental Inquiry

Flowchart (text representation):

Description: This flow defines how the AI agent handles a rental inquiry scenario, collects relevant information, invokes business tools when necessary, and concludes the interaction professionally.

Commercial Property Inquiry

Flowchart (text representation):

Description: This flow defines how the AI agent handles a commercial property inquiry scenario, collects relevant information, invokes business tools when necessary, and concludes the interaction professionally.

Investment Inquiry

Flowchart (text representation):

Description: This flow defines how the AI agent handles a investment inquiry scenario, collects relevant information, invokes business tools when necessary, and concludes the interaction professionally.

Returning Customer

Flowchart (text representation):

Description: This flow defines how the AI agent handles a returning customer scenario, collects relevant information, invokes business tools when necessary, and concludes the interaction professionally.

Appointment Rescheduling

Flowchart (text representation):

Description: This flow defines how the AI agent handles a appointment rescheduling scenario, collects relevant information, invokes business tools when necessary, and concludes the interaction professionally.

Appointment Cancellation

Flowchart (text representation):

Description: This flow defines how the AI agent handles a appointment cancellation scenario, collects relevant information, invokes business tools when necessary, and concludes the interaction professionally.

Conclusion

These conversation flows serve as the functional blueprint for the LangGraph workflow that will be implemented later in the project. Each flow can be translated into graph nodes, state transitions, and tool-calling logic.
